

8410920 Snow Plow Manifold Assembly

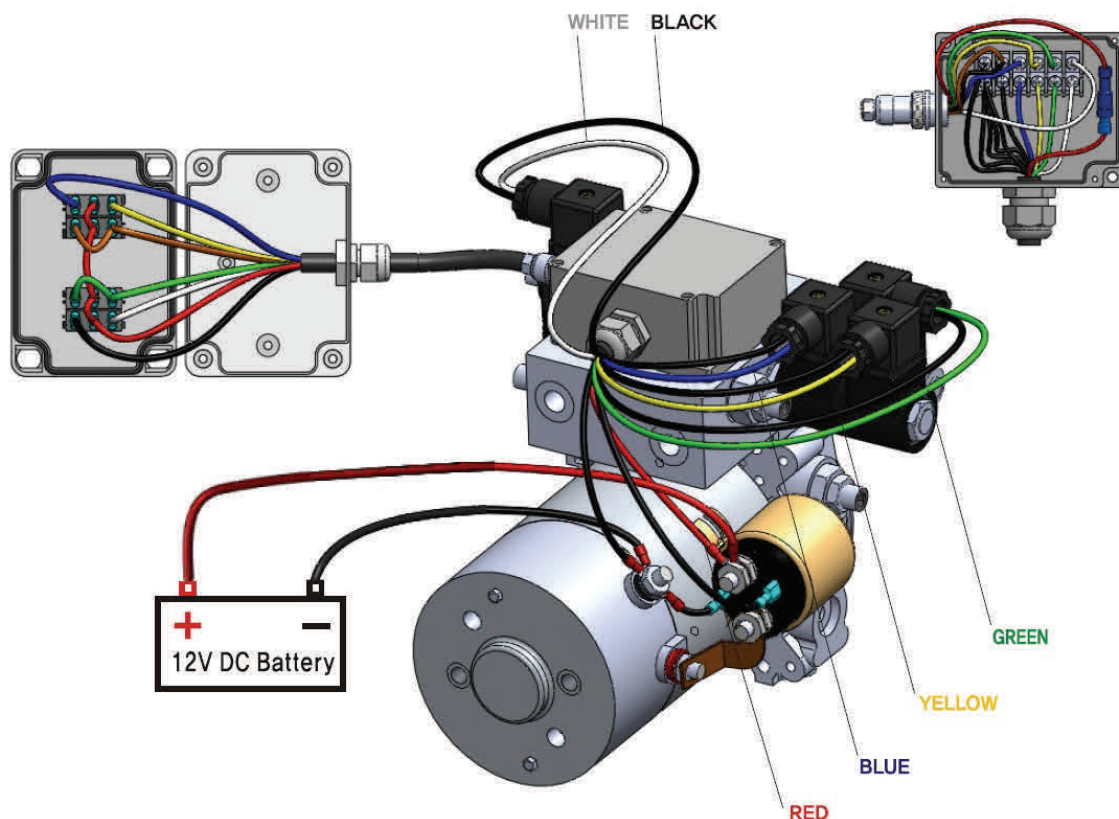

Functionality:

This snow plow manifold is designed to operate all the functions of a power operated angling snow plow. It has a Lift-Hold-Lower function for the blade with a continuous float capability. A directional valve controls the angling of the blade and an integrated cross-over relief valve protects the system from damage if the blade hits a curb or becomes obstructed from plowing. It Includes the remote control switch box with 10 ft. of cord.

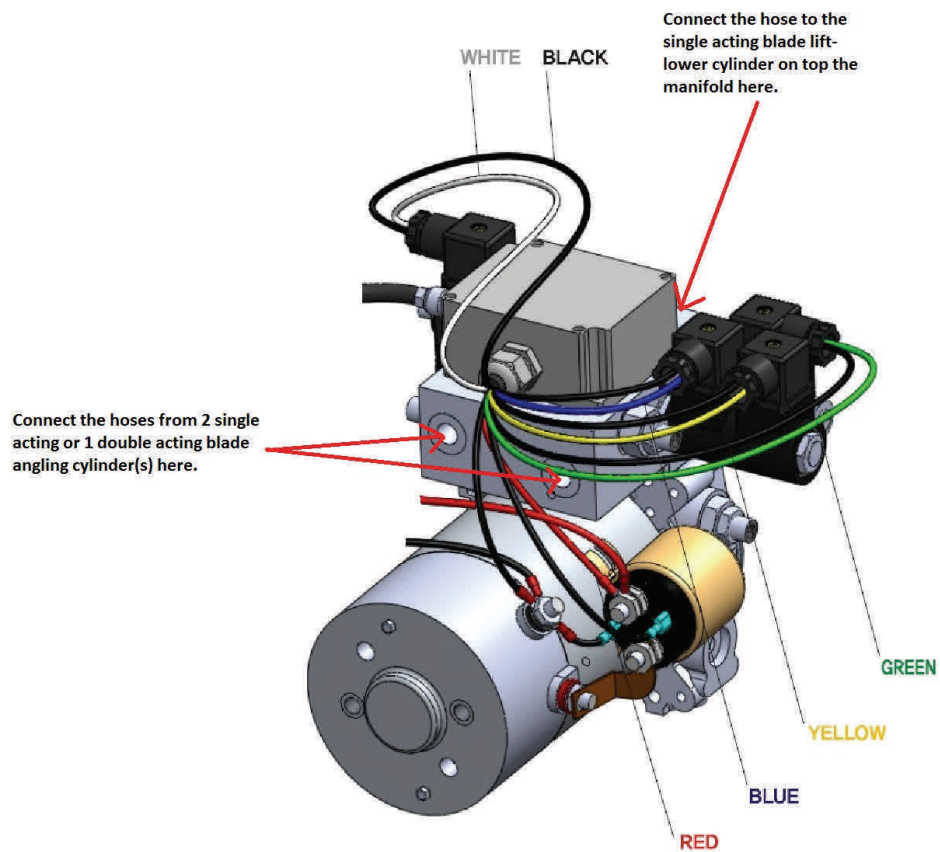

Use With:

Use with convertible power packs 8478141 and 8478158. The manifold simply bolts to the top of these power packs.

Wiring:

Hose Connections:
