

# 26" Ebike-Installation instruction

SKU#:8907645

## Step 1 Pedal installation

- The pedal marked R has right-hand threads. Tighten it in a clockwise direction.
- The pedal marked L has left-hand threads. Tighten it in a counterclockwise direction (anti-clockwise)
- Turn the right pedal marked R into the right side of the crank arm, and the left pedal marked L into the left side of the crank arm.

- There is a right pedal marked R and a left pedal marked L.
- A pedal wrench is preferred for attaching pedals.
- Ensure pedals are secure in crank arms and check the tightness.

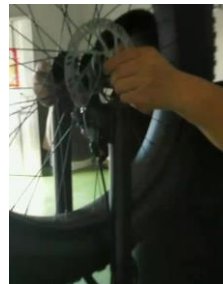

## Step 2 Handlebar installation

- Remove the screws from the handle stem clamp.
- Position the handlebar on the handle stem clamp and tighten the screws.

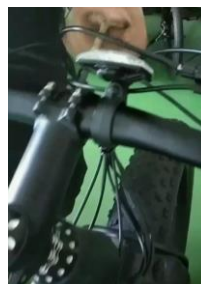

## Step 3 Installing the wheel

- Loosen the screws from the two sides of hub.
- Place the wheel into the fork dropouts and tighten the screws of hub.

- ## Step 4 Test stem and handlebar tightness
- Move the bicycle on the ground, tighten the screws from the handlebar and fork.

## Step 5 Battery installation

- Unlock the battery and place it on the holder.
- Reset the position of battery on the holder and Rotate the locker to lock it.

## Step 6 Saddle installation

- Loose the seat clamp, put the seat post into the the seat tube.
- Tighten the seat clamp.
