Installation and service of this equipment should be performed by competent and qualified personnel.

Improper installation, adjustment, alteration, service, or maintenance can cause injury or property damage. For assistance, or additional information, consult a qualified service technician, service agency, or your vehicle dealer.

Some model years may require cutting, sanding, or filing of the rocker panel guards for a good fit. Check the fit of the guards prior to removing the adhesive backing. If you are unsure of the make and model of your vehicle, refer to your vehicle's owner's manual or contact your vehicle manufacturer with the VIN number for information.

The manufacturer only warrants approved installation using the instructions, adhesive tape, and provided hardware. Failure to install according to these instructions will invalidate any warranty. DO NOT use alternative adhesives such as silicone, liquid nails, or superglue in an attempt to attach the panels.

Painting of the rocker panel guards, if desired, should be done before installing onto the vehicle. Clean the surface to be painted thoroughly with an appropriate degreaser. DO NOT use lacquer thinner or enamel reducer as a degreaser. Wipe with a clean tack cloth before painting, then apply an undercoat designed to promote paint adhesion to TPO plastic. Contact the paint manufacturer for more information.

WARNING Maintain a minimum clearance of 4 inches from any exhaust pipes. Do not allow hot exhaust gases to vent directly onto the guards.

Before installation, remove any rust, down to bare metal, from the vehicle rocker panel and/or fasteners that will be covered by the guards and paint the bare metal with a rust inhibiting paint. Allow the paint to dry before installing the guards.

Some vehicles may have decals that will interfere with installation of the rocker panel guards. Remove any decals prior to installation.

NOTE: The adhesive tape requires installation to be with an ambient and part temperature of at least 60°F (16°C) for proper adhesion. A minimum of 24 hours is also needed to cure and establish a firm bond. Once the backing is removed and attached to the vehicle surface, do not wash the vehicle for 24 hours after installation, and avoid kicking or moving the panels during that period.

INSTALLATION

Tools needed for installation:

Lint-Free Cloth for cleaning, and Rubbing Alcohol.

STEP 1: Start by opening the vehicle doors.

STEP 2 : Use soap and water to clean off the door sills and the top and bottom of the vehicle rocker panels. Allow the surfaces to dry completely.

STEP 3: WITHOUT REMOVING THE ADHESIVE BACKING, place the rocker panel guard onto the appropriate rocker panel to check that it fits your vehicle. Make note of where the adhesive backing will be attached.

STEP 4: Use a lint free cloth with rubbing alcohol applied to thoroughly wipe all surfaces where the adhesive backing will be attached. Allow the surfaces to dry.

STEP 5: Peel back about 2 to 3 inches of the adhesive backing from behind the rocker panel guard. It is recommended to use masking tape to tape this short end of backing to the front of the rocker panel guard which will make it easier to locate and grasp.

STEP 6: VERY CAREFULLY align the rocker panel guard to its desired position without allowing any of the exposed adhesive to touch the vehicle surfaces. Once in position, slowly and deliberately place the rocker panel guard against the vehicle surface so the adhesive sticks to the surface.

STEP 7: Pull each adhesive backing slowly so that the adhesive tape is exposed to the vehicle surface. While pulling the backing, press FIRMLY on the surface above the adhesive to ensure the adhesive tape completely attaches to the vehicle.

STEP 8: Wait 24 hours for the adhesive to cure and establish a firm bond before washing. Avoid kicking or moving the panels during that period.

REPEAT THESE STEPS FOR EACH ROCKER PANEL GUARD.
