

This hitch is designed to move trailers short distances at low speed.
Prolonged use on rough terrain will loosen the vise clamps.
Check periodically and retighten following the instruction procedure.

IMPORTANT

Before use, the loader bucket hitch must be securely locked to the loader blade. Failure to lock this device will damage the bucket hitch and the trailer ball socket.

1. Set the hitch assembly onto the loader as shown in diagram. The front edge of the bucket blade must contact the tip of the wedge.
2. Screw down the top vise to hold the hitch in horizontal position
3. Turn in the blade back vise using an appropriate wrench until firm against the back edge of the blade
4. Tighten the top vise 1/3 turn past snug
5. Tighten the blade back vise 1/3 turn past snug
6. Read Danger Safety message on hitch top to bystanders

If the Danger safety message is damaged or removed, replace with a new label
